

"Out of Africa" / Complete Replacement Model vs. Regional Continuity Model

Out Of Africa / Complete Replacement Model

This model shows the replacement of earlier fossil forms by Anatomically Modern Humans as they migrate from Africa. These Anatomically Modern Humans replace previous fossil forms (indicated by the solid line). There is no genetic contact between the Anatomically Modern Humans and previous fossil forms.

Regional Continuity Model

This model shows *Homo erectus* on each continent evolved through various fossil forms into Anatomically Modern Humans. Intercontinental gene flow is depicted by the horizontal dashed lines.
